DEFINITIONS

FOOD PROCESSING OCCUPATIONS

Definition of food processing workers

(All definitions used for this study are the ones developed by the Global Jobs and Growth team)

Proposed ISIC Rev. 4 mapping (work in progress)

Key Assumption: Sectoral weights derived from employment data are assumed to be applicable to value-added data.

Infrastructure and Energy

- **Employment:** ISIC divisions 35-39 (utilities), 41-43 (construction), and 61 (telecommunication).
- **Output:** ISIC sections D, E, F (35-39; 41-43), weighted ISIC section J (to extract telecommunication).
- **Justification:** Jobs Council Minutes.

Healthcare

- **Employment:** ISICs sectors 86-88 (human health and social work)
- **Output:** ISIC section Q (86-88)
- **Justification:** Jobs Council Minutes.

Agribusiness (more details next section)

- **Employment:** Wage employment in 01 (crop and animal), 02 (forestry) and 03 (fishing); all employment in 10 (manufacture of food), 11 (manufacture of beverages), and 12 (manufacture of tobacco).
- **Output:** Weighted ISIC section A and weighted section C.
- **Justification:** : Jobs Council Minutes, reports & literature.

Manufacturing

- **Employment:** ISIC sectors 13-33 (all manufacturing sectors minus agribusiness)
- **Output:** Weighted ISIC section C.
- **Justification:** Jobs Council Minutes.

Tourism (more details next section)

- **Employment:** It is recommended to use ILO reported tourism employment directly. When such data is not available, weighted shares are derived from ISICs sectors 49 (land transport), 50 (water transport), 51 (air transport), 55 (accommodation), 56 (food and beverages), 68 (real estate activities), 77 (rental), 79 (travel agency), 90 (arts and recreation), 91 (cultural activities), 92 (gambling), and 93 (recreation), using the MIC or LIC average of countries with tourism data.
- **Output:** Weighted ISIC sections of H, I, N and R.
- **Justification:** : Jobs Council Minutes and ILO.

* Note: Employment data are reported at ISIC division level (2-digit) in ILO, while GDP data, in most cases, are only reported at the ISIC section level (e.g., A, B, C). Therefore, the proposed mapping is done at different levels. Weights are applied in value added when there is a lack of aggregates by detailed sectors.

Agribusiness

- “Agribusiness refers to the business sector encompassing farming and farming-related commercial activities, including the supply of agricultural inputs, the production and transformation of agricultural products, and their distribution to final consumers.” – FAO
- Key characteristics compared to subsistence agriculture
 - Formal/wage employment ([McCullough, 2012](#))
 - High productivity ([Sollin et al., 2014](#))
 - Market-oriented ([WDR, 2008](#))
 - Organized ([FAO, 2014](#))
 - Capital-intensive ([FAO, 2012](#))
 - Value-chain integration ([FAO, 2014](#))
- Operationalization based on key characteristics
 - **Current strategy:** Wage employment in agriculture sector (as a proxy of ‘modern agriculture’) plus manufacturing of food products, beverages, and tobacco in the manufacturing sector. But the limitation of using a wage-based breakdown is that it does not allow us to identify output.
 - **Alternative strategy:** Again, the core idea is to break down agriculture into ‘traditional’ and ‘modern’ components, allocating the modern share to ‘agribusiness.’ A crude method for this classification relies on a threshold—defined as **x% of average HIC labor productivity in agriculture**. Under this approach, countries with agricultural productivity above the threshold are classified entirely as ‘modern’ in terms of both value added and employment, while those below are classified as ‘traditional.’

Definition of food processing and agribusiness workers

- All definitions of workers used in this study follow those compiled by the Global Jobs and Growth team and rely on International Standard Industrial Classification of All Economic Activities (ISIC) codes at 2-digit level.
- Food processing workers include:
 - Economic activity (ISIC-Rev.4), 2-digit level: 10 - Manufacture of food products
 - Economic activity (ISIC-Rev.4), 2-digit level: 11 - Manufacture of beverages
- Agribusiness sector workers used as a benchmark include:
 - Primary agricultural activities (ISIC divisions 01–03) for wage employees and employers, as well as downstream activities related to the processing of agricultural goods, including food, beverages, and tobacco manufacturing (ISIC divisions 10–12).

SUPPLY SIDE ANALYSIS

WHO ARE THE FOOD PROCESSING WORKERS IN INDIA?

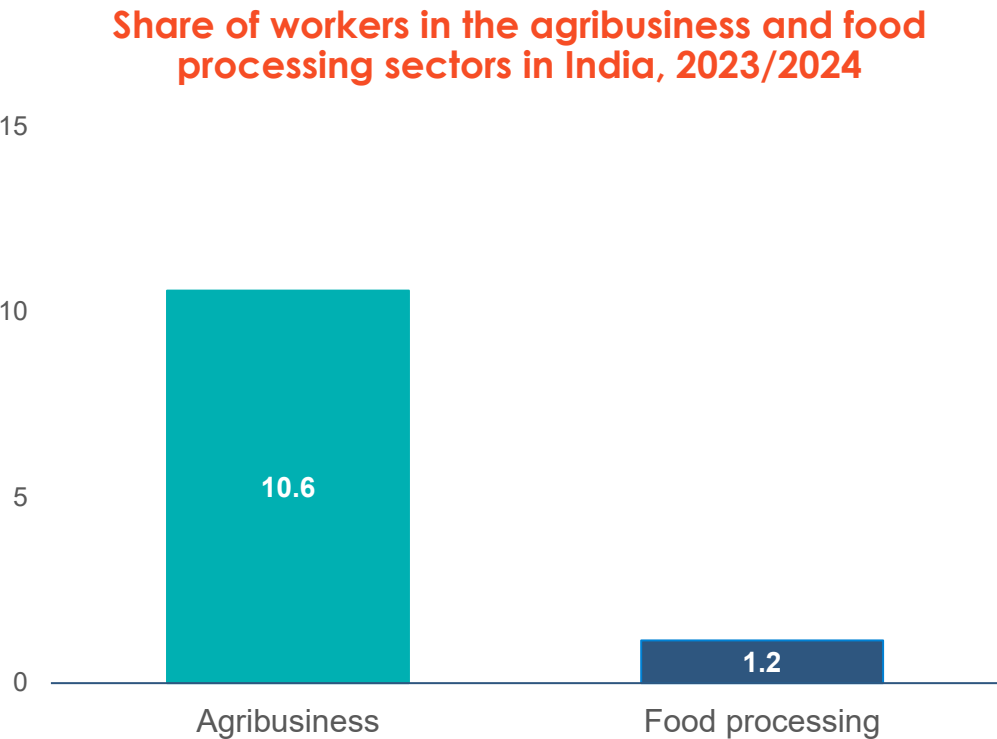

Data

Data – Supply side

- Microdata from the India **Periodic Labour Force Survey (PLFS)**
 - Years: 2021, 2022, and 2023
 - Earlier waves are not included because they use ISCO- 88 classification of occupations (new rounds use ISCO-08). This ensures consistency in the occupational classification across time.
 - Harmonized data in the WBG's Global Labor Database (GLD) data repository
- Collected by the National Statistical Office of the Ministry of Statistics and program Implementation (MoSPI)
- Collects information on household characteristics, individual demographics, and education characteristics of respondents, as well as labor market information over the past 12 months and 7 days prior to the interview
- The PLFS sample is nationally representative of India
- The sample was designed to provide reliable employment statistics at State-level, and by Urban/Rural status , and Gender.

Profiling food processing workers in India

Food processing represents about 1.2 percent of India’s total employment, or roughly 6 million workers. While still a small part of the labor market, it is a strategically important segment because it sits at the intersection of agriculture, manufacturing, and jobs.

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The agribusiness sector is defined using 2-digit International Standard Industrial Classification of All Economic Activities (ISIC) codes and includes primary agricultural activities (ISIC divisions 01–03) for wage employees and employers, as well as downstream activities related to the processing of agricultural goods, including food, beverages, and tobacco manufacturing (ISIC divisions 10–12). The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

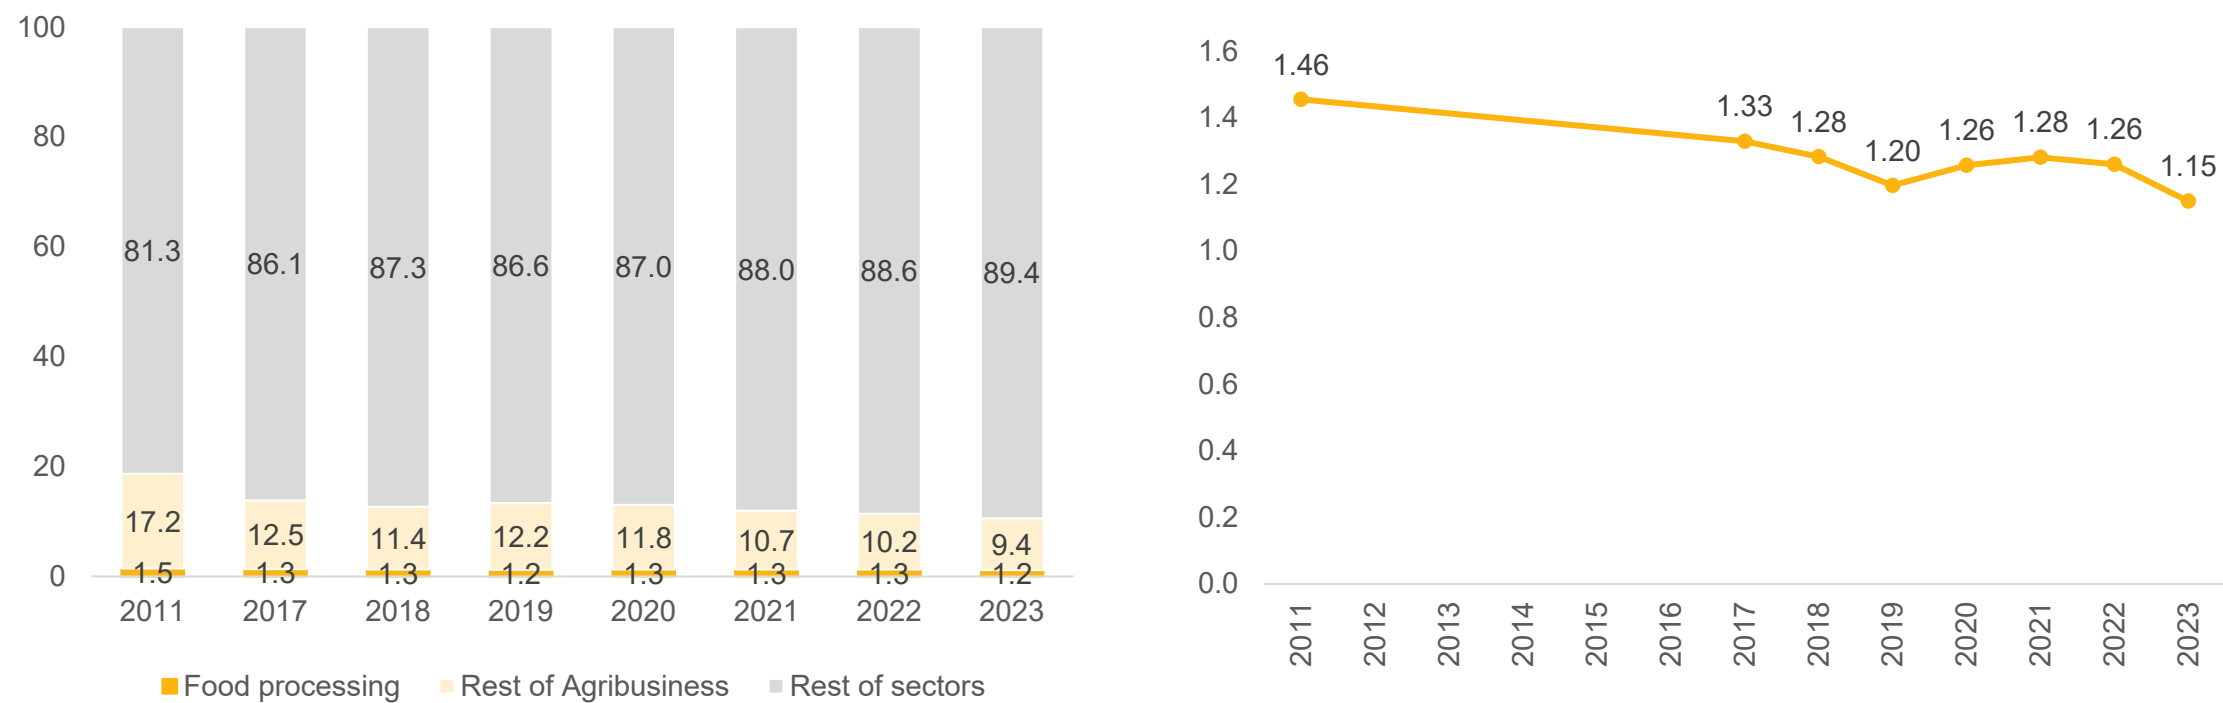

Share and number of workers in the agribusiness and food processing sectors in India, 2023/2024

	Percentage of workers in:		Number of workers in:	
	Rest of sectors	Sector of interest	Rest of sectors	Sector of interest
Agribusiness	89.4	10.6	433,265,415	51,216,054
Food processing	98.8	1.2	478,908,389	5,573,080

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The agribusiness sector is defined using 2-digit International Standard Industrial Classification of All Economic Activities (ISIC) codes and includes primary agricultural activities (ISIC divisions 01–03) for wage employees and employers, as well as downstream activities related to the processing of agricultural goods, including food, beverages, and tobacco manufacturing (ISIC divisions 10–12). The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

The share of employment in food processing remains low and has declined modestly over time, from about 1.5% in 2011 to 1.2% in 2023.

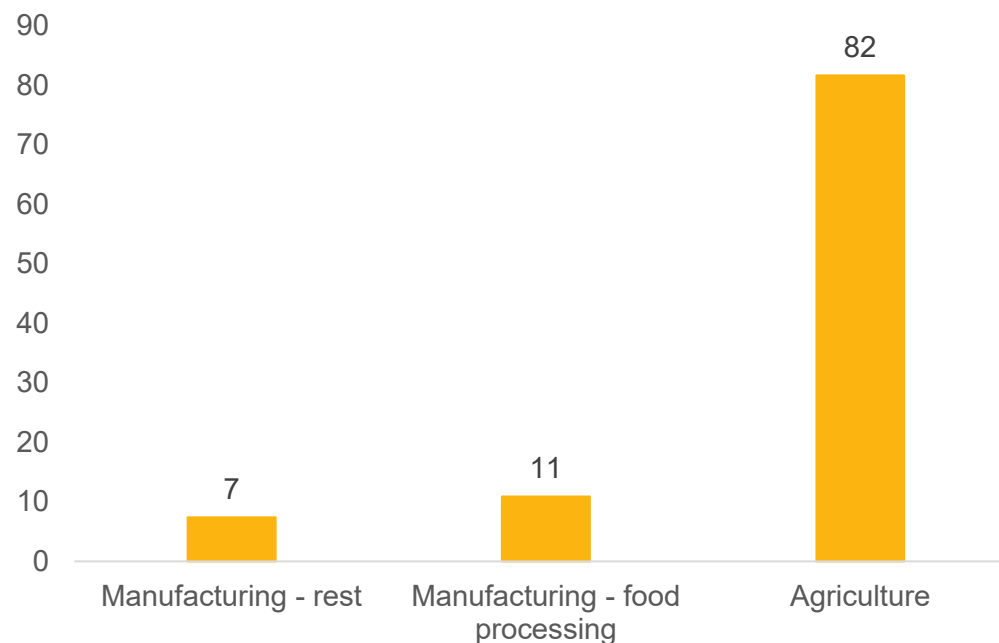

Share of food processing employment in India (%), 2011-2023

Source: Own elaboration based on microdata from for India’s Employment and Unemployment Survey for 2011/12 and Periodic Labour Force Surveys from 2017/18 to 2023/24. . The agribusiness sector is defined using 2-digit International Standard Industrial Classification of All Economic Activities (ISIC) codes and includes primary agricultural activities (ISIC divisions 01–03) for wage employees and employers, as well as downstream activities related to the processing of agricultural goods, including food, beverages, and tobacco manufacturing (ISIC divisions 10–12). The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

Within agribusiness, most workers remain in agriculture, while food processing accounts for only about 11 percent of employment.

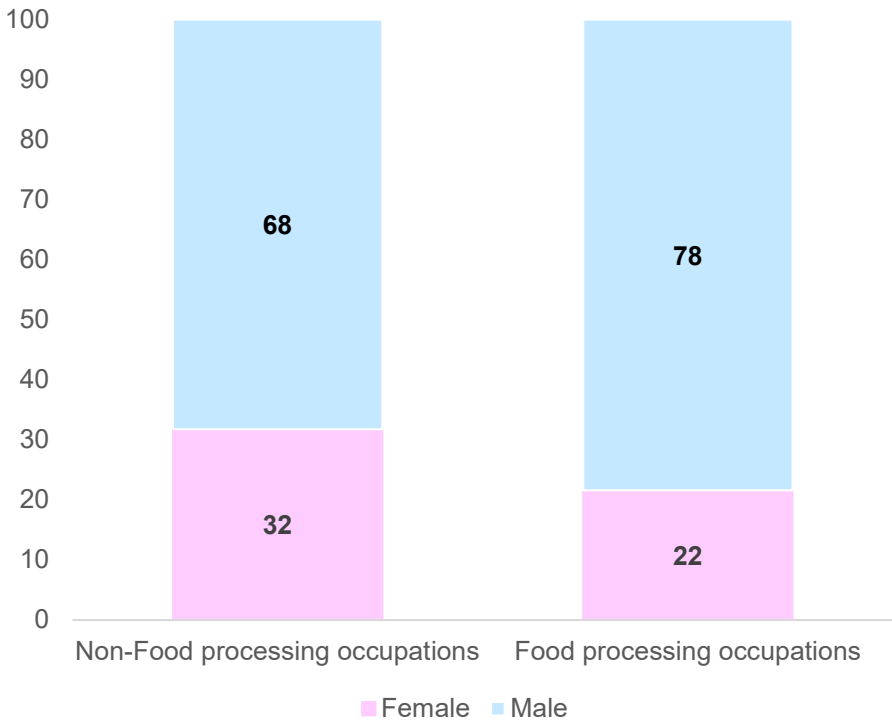

Distribution of employment in the agribusiness sector in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The agribusiness sector is defined using 2-digit International Standard Industrial Classification of All Economic Activities (ISIC) codes and includes primary agricultural activities (ISIC divisions 01–03) for wage employees and employers, as well as downstream activities related to the processing of agricultural goods, including food, beverages, and tobacco manufacturing (ISIC divisions 10–12). The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

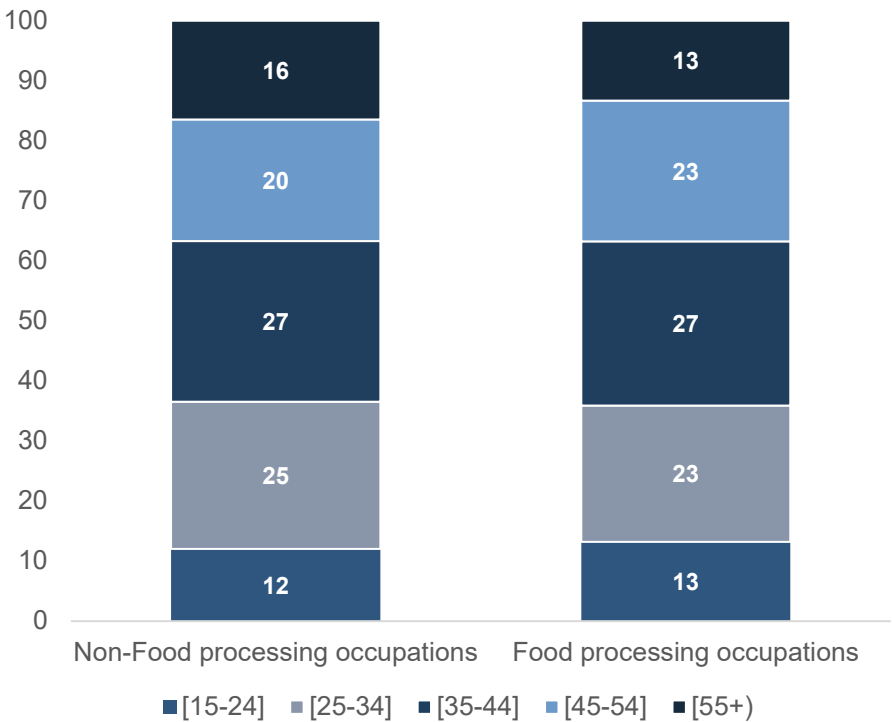

Food processing employment is mostly male dominated, but it has a relatively broad age profile. This suggests that skilling strategies need to serve both young entrants and experienced workers already in the sector.

Food processing employment by gender in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

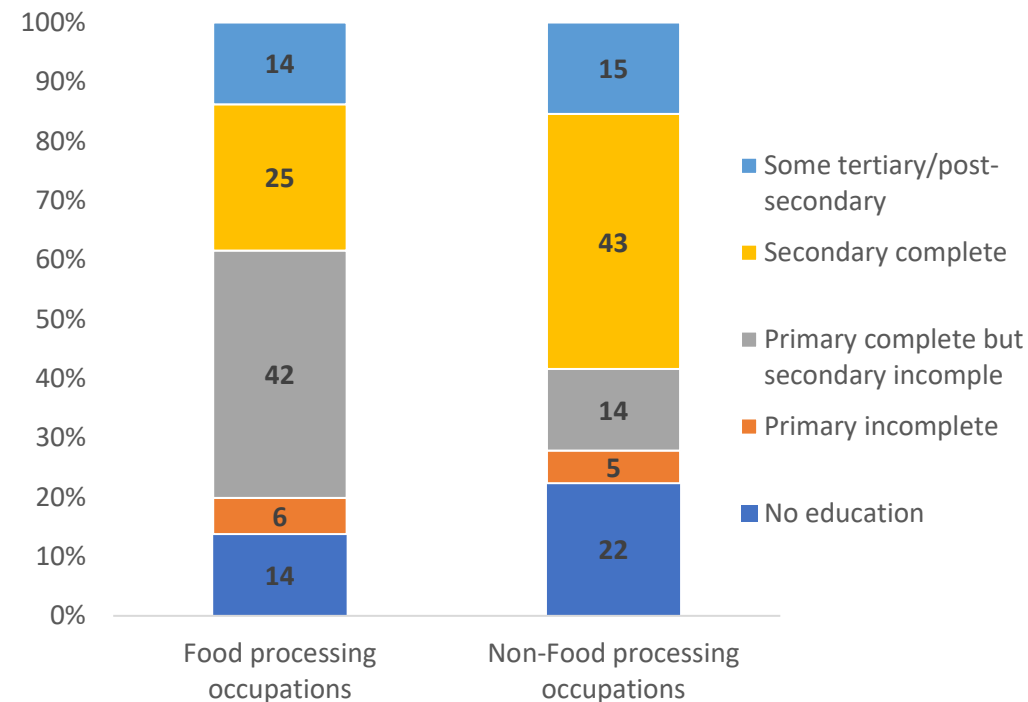

Food processing employment by age in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

Almost 8 in 10 food processing workers have secondary education or less. This means skills development solutions need to be practical, accessible, and designed for workers who may not have followed long formal education pathways.

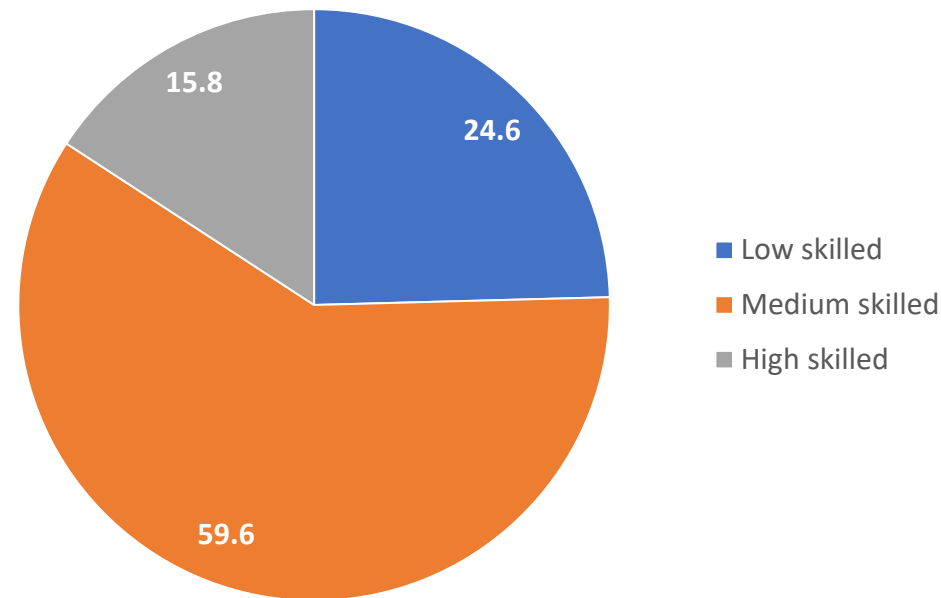

Food processing employment by educational attainment in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

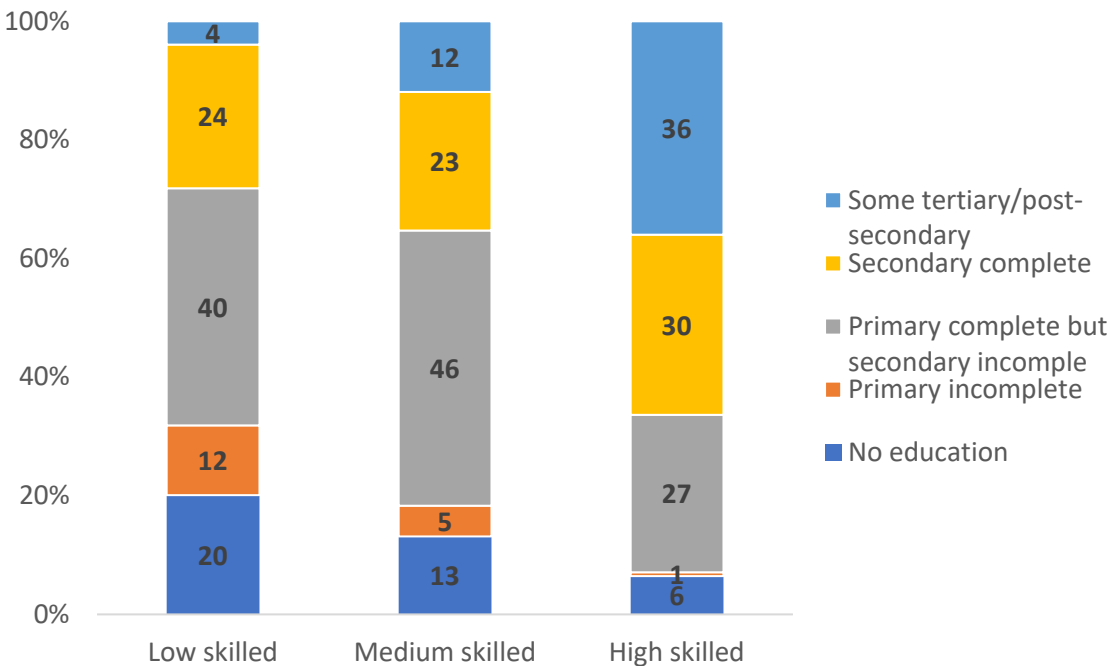

The sector is dominated by medium-skilled jobs, with a smaller but important share of high-skilled occupations. This points to a need for both job-ready technical training and pathways for workers to move into supervisory, technical, and managerial roles.

Food processing workers by skill level in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Skilled occupations correspond to ISCO major groups 1, 2, and 3 (Managers, Professionals, Technicians); semi-skilled occupations to groups 4, 5, 6, 7 and 8 (Clerical support, Service & sales, Skilled agricultural, Craft & related trades, Plant & machine operators); and unskilled occupations to group 9 (Elementary occupations).

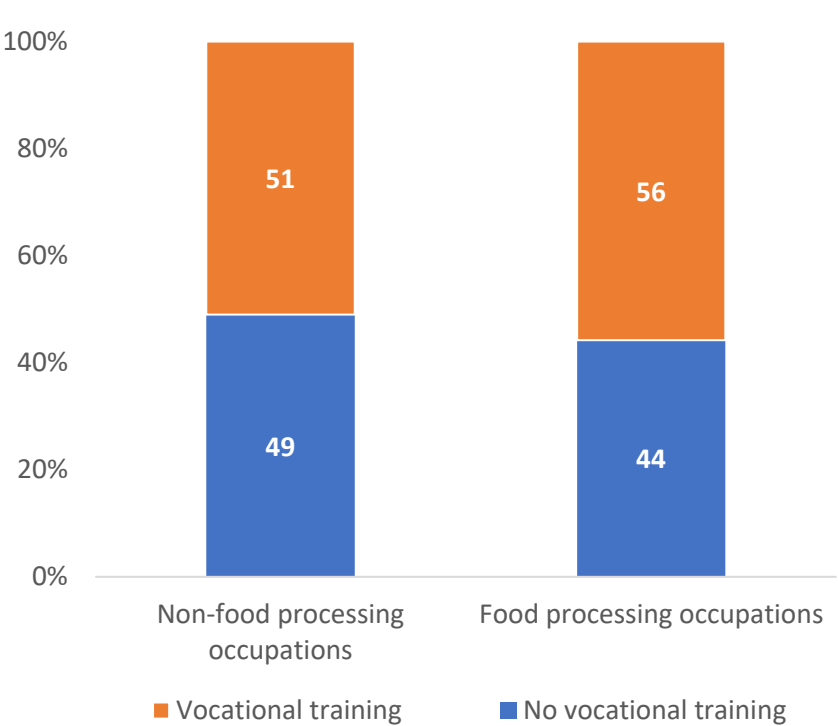

Food processing workers by skill level and educational attainment in India, 2023/2024

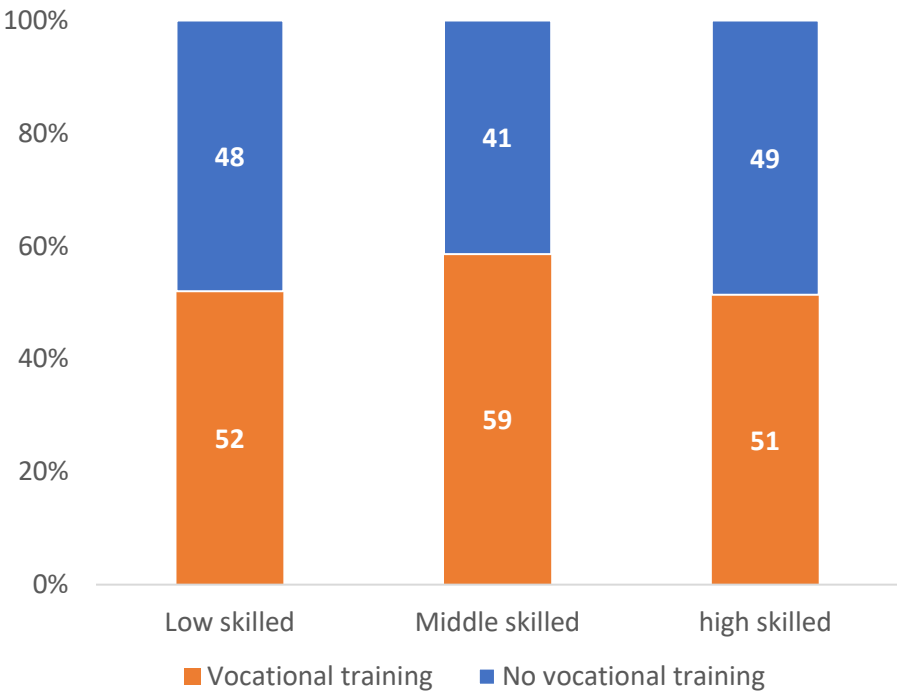

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Skilled occupations correspond to ISCO major groups 1, 2, and 3 (Managers, Professionals, Technicians); semi-skilled occupations to groups 4, 5, 6, 7 and 8 (Clerical support, Service & sales, Skilled agricultural, Craft & related trades, Plant & machine operators); and unskilled occupations to group 9 (Elementary occupations).

More than half of food processing workers report some vocational training, including across skill levels. This suggests that training already matters in the sector, but the key question is whether it is sufficiently aligned with the jobs employers need.

Food processing employment by vocational training status in India, 2023/2024

Food processing employment by vocational training status and skills level in India, 2023/2024

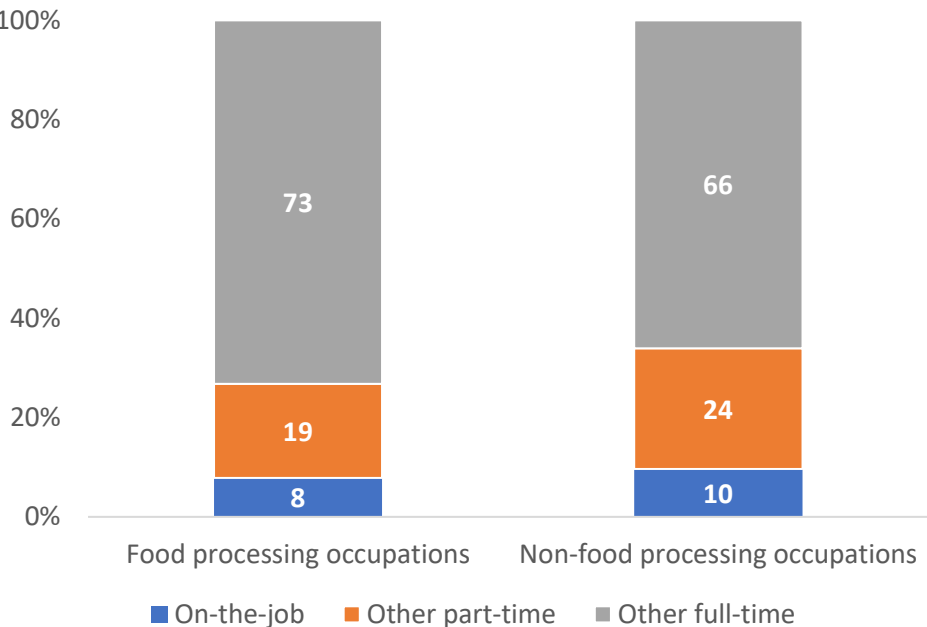

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Vocational training includes both formal and non-formal, including hereditary, self-learning, learning on the job, others.

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Skilled occupations correspond to ISCO major groups 1, 2, and 3 (Managers, Professionals, Technicians); semi-skilled occupations to groups 4, 5, 6, 7 and 8 (Clerical support, Service & sales, Skilled agricultural, Craft & related trades, Plant & machine operators); and unskilled occupations to group 9 (Elementary occupations). Vocational training includes both formal and non-formal, including hereditary, self-learning, learning on the job, others.

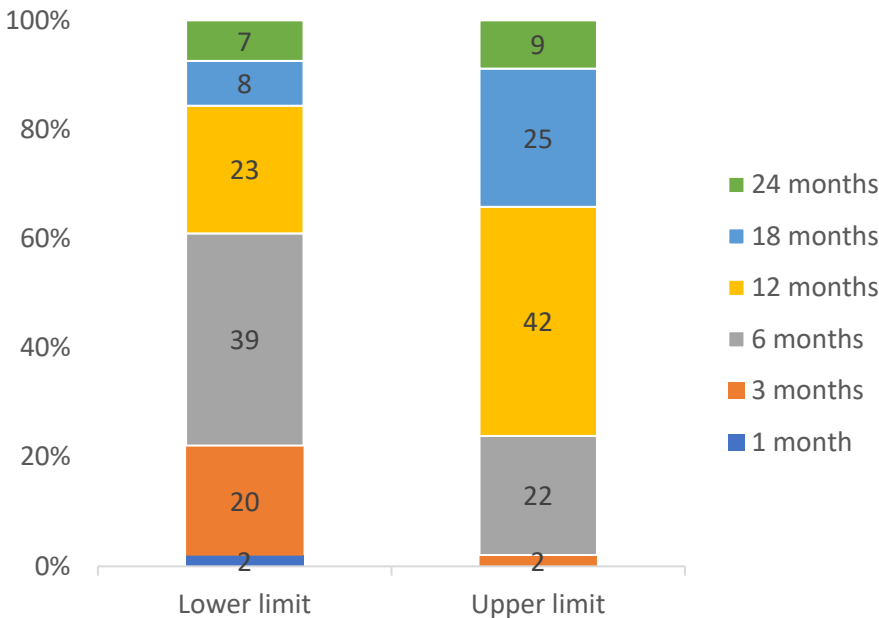

Formal vocational training is mostly full-time, while on-the-job training remains limited. For a sector where many skills are learned through practice, there may be scope to strengthen workplace-based and employer-led training models.

Food processing employment by type of formal vocational training in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Vocational training includes both formal and non-formal, including hereditary, self-learning, learning on the job, others.

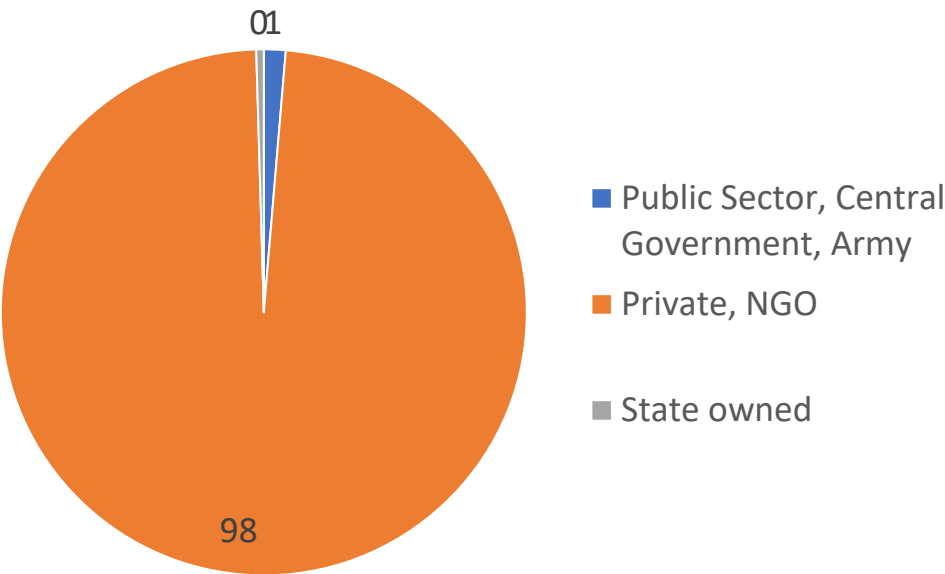

Food processing workers by length of vocational training in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Vocational training includes both formal and non-formal, including hereditary, self-learning, learning on the job, others.

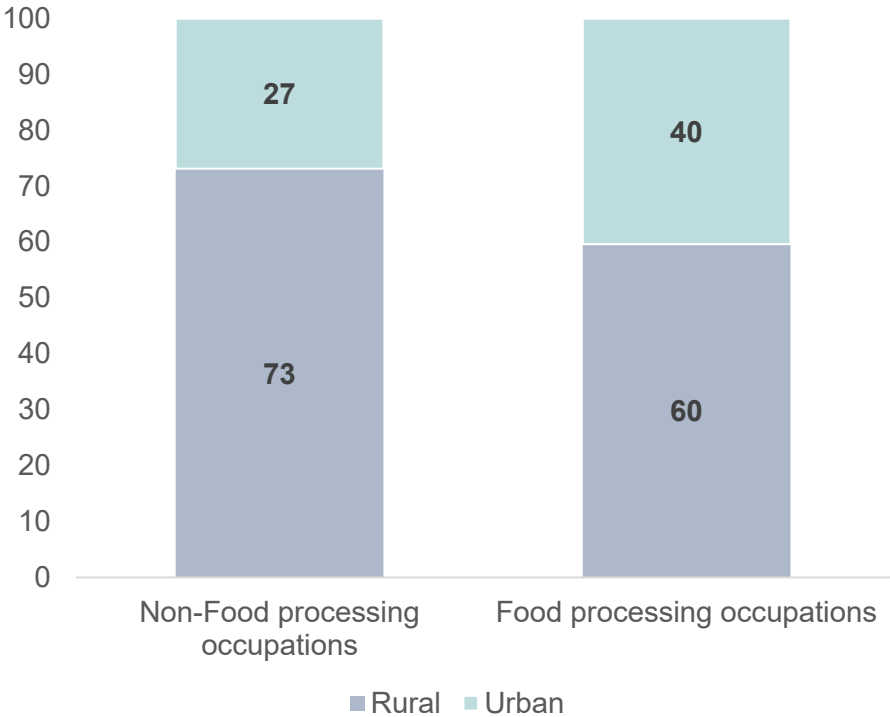

Food processing jobs are driven almost entirely by the private sector and are more urban than jobs in other sectors. Still, most remain in rural areas, making food processing especially relevant for creating non-farm opportunities close to agricultural communities.

Food processing employment by sector in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

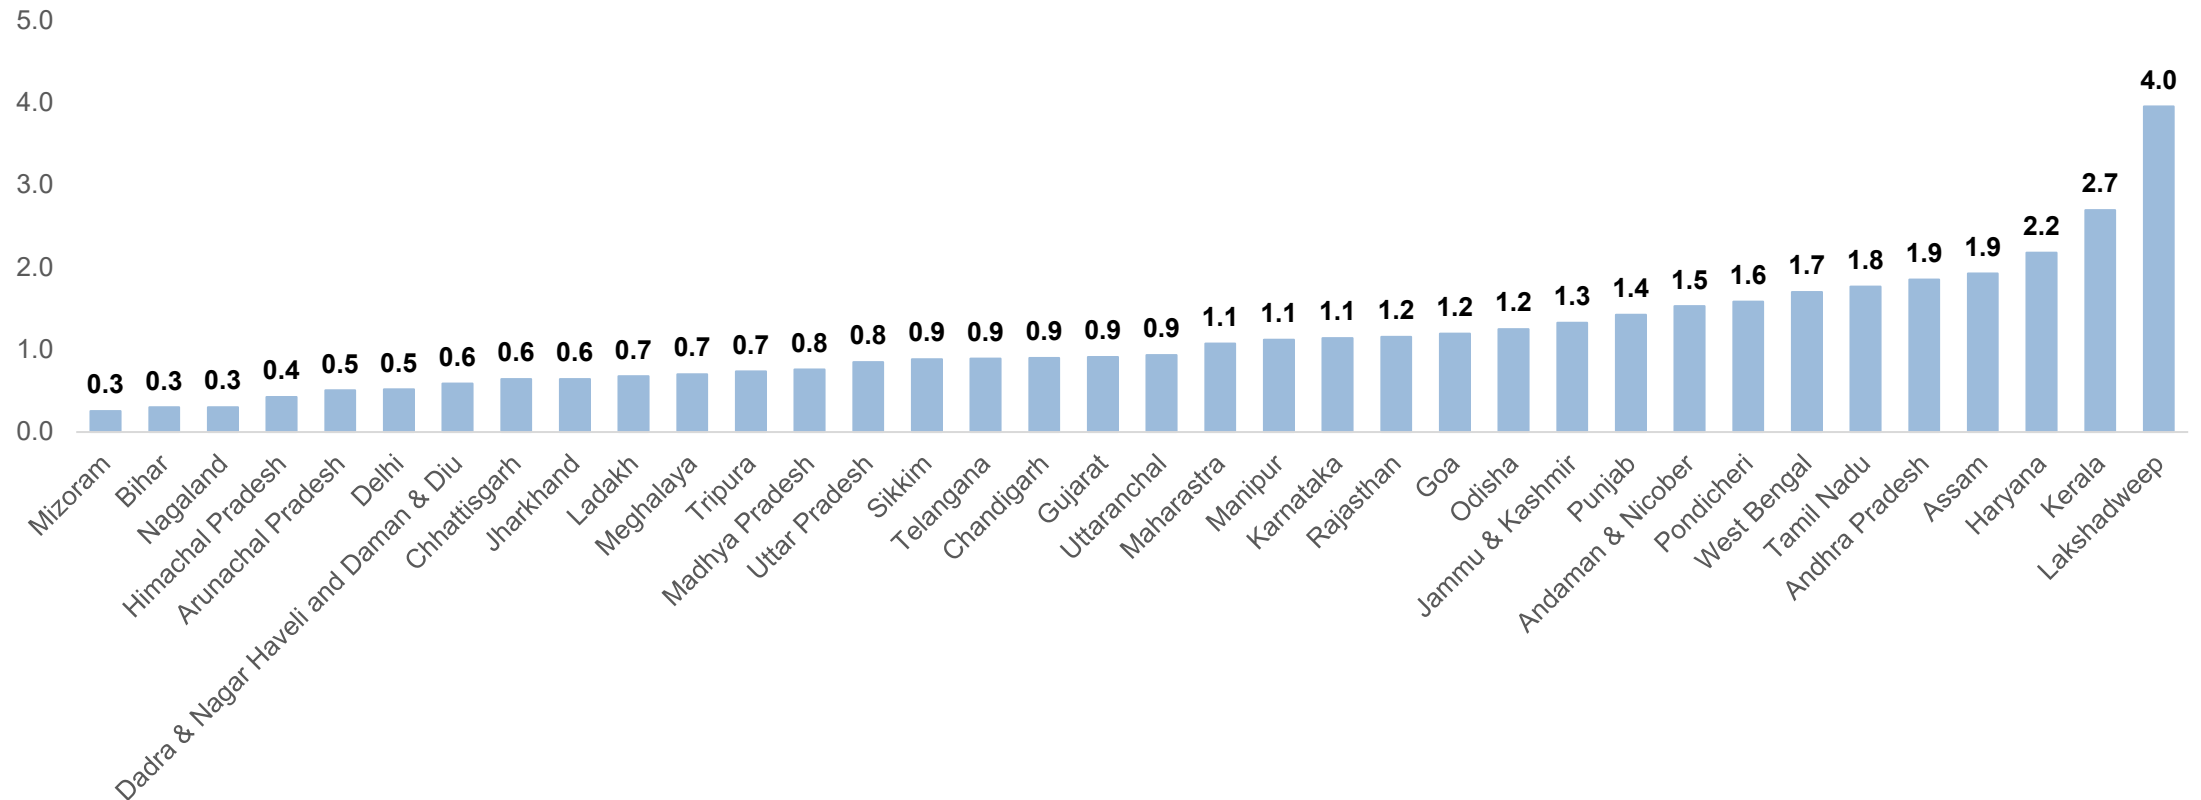

Food processing employment by place of residence in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

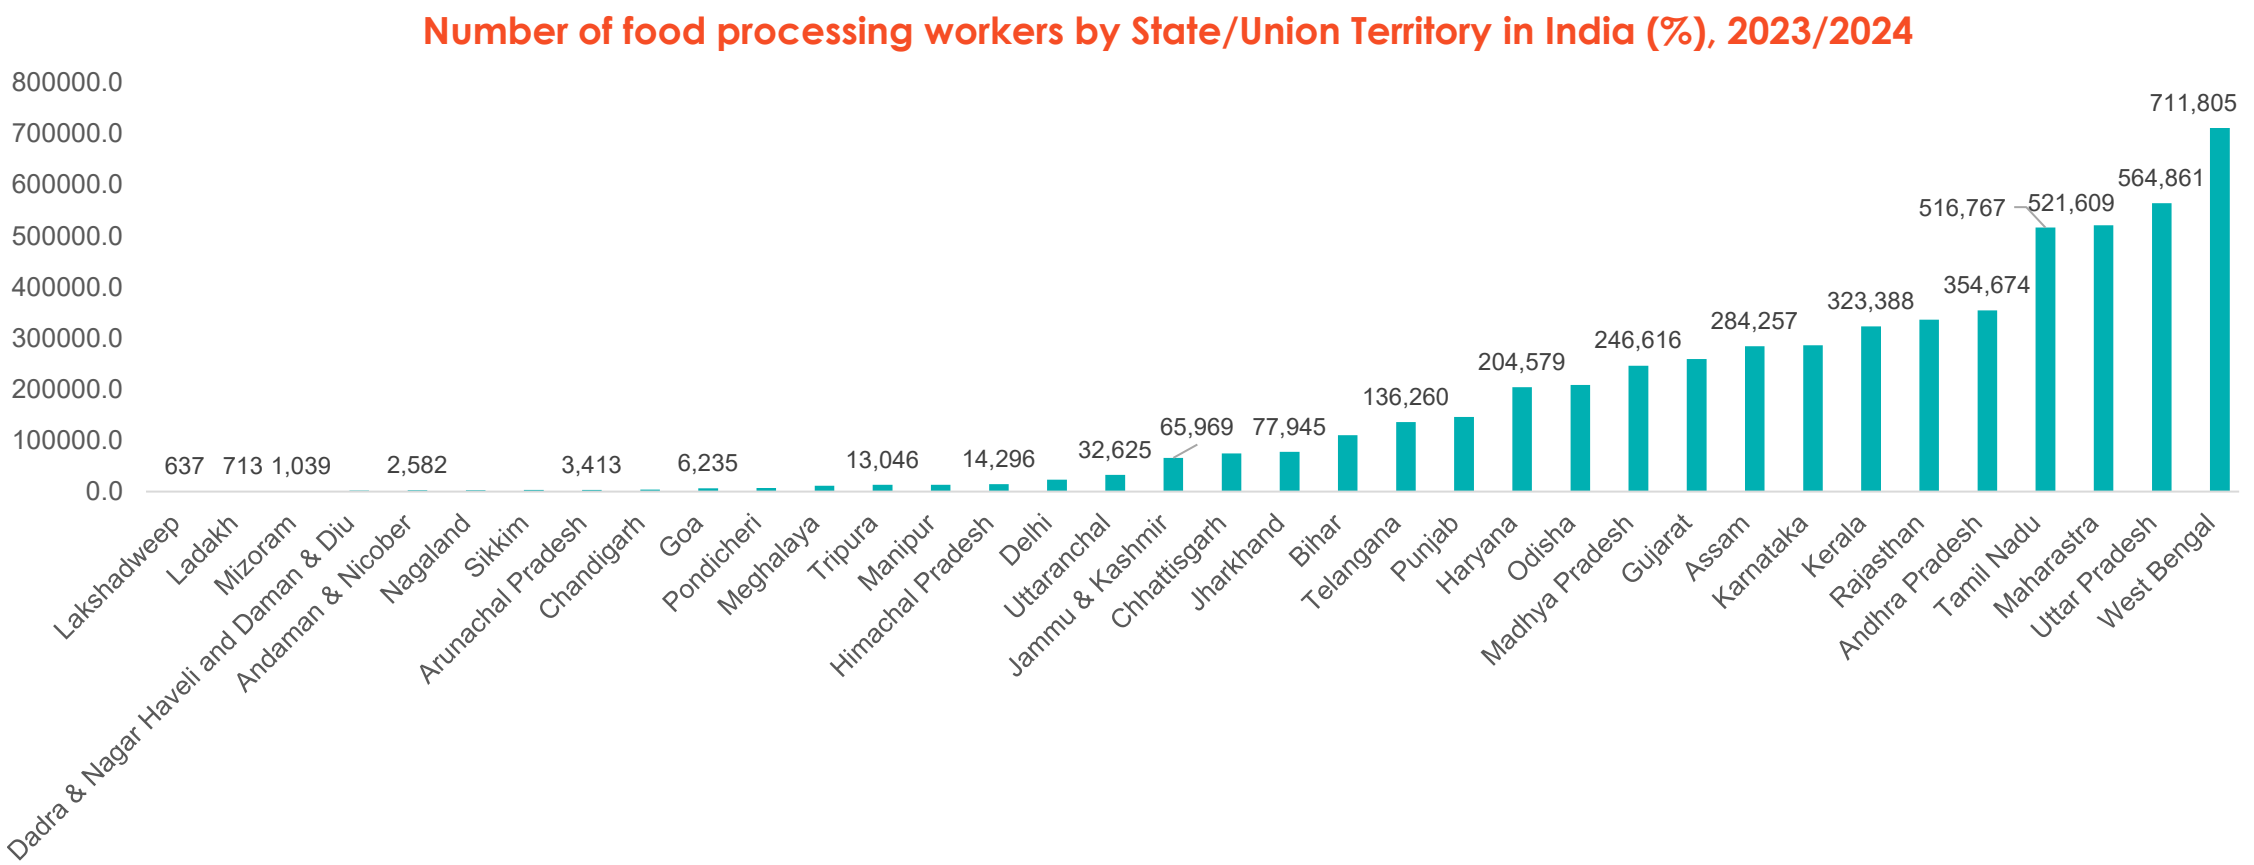

The importance of food processing varies widely across States and UTs. Some smaller States and UTs have relatively high employment shares, suggesting that local economic structure matters when identifying where sector-specific skilling investments may be most relevant.

Share of food processing employment by State/Union Territory in India (%), 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

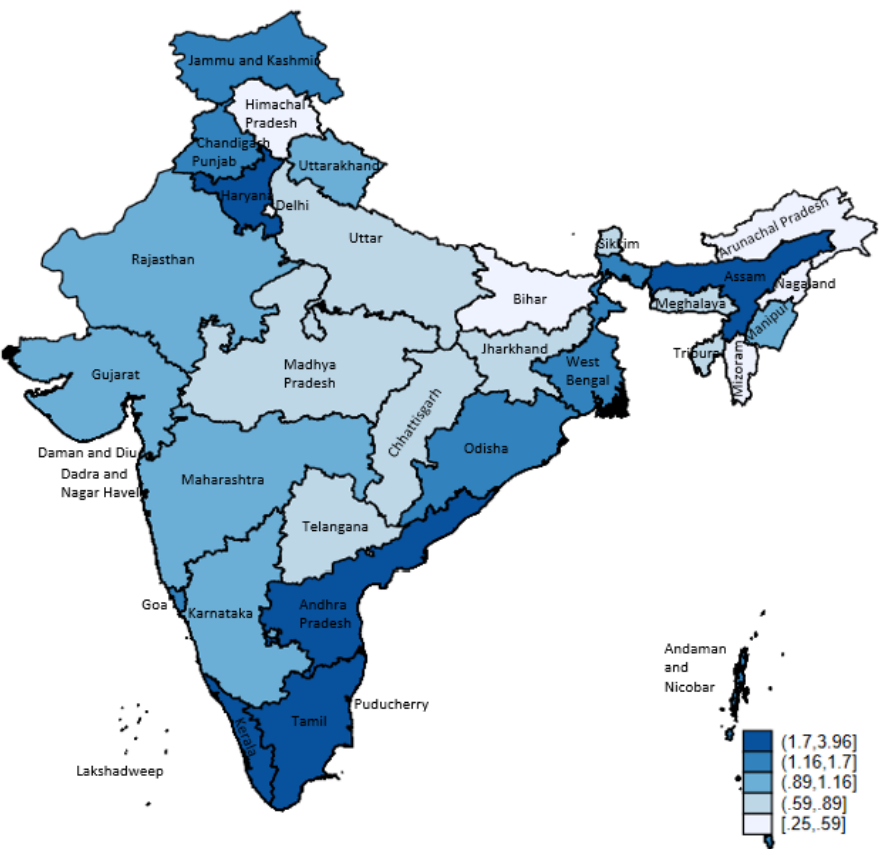

In absolute numbers, food processing employment is concentrated in large states such as West Bengal, Uttar Pradesh, Maharashtra, and Tamil Nadu. These states may offer the largest scale for skilling interventions.

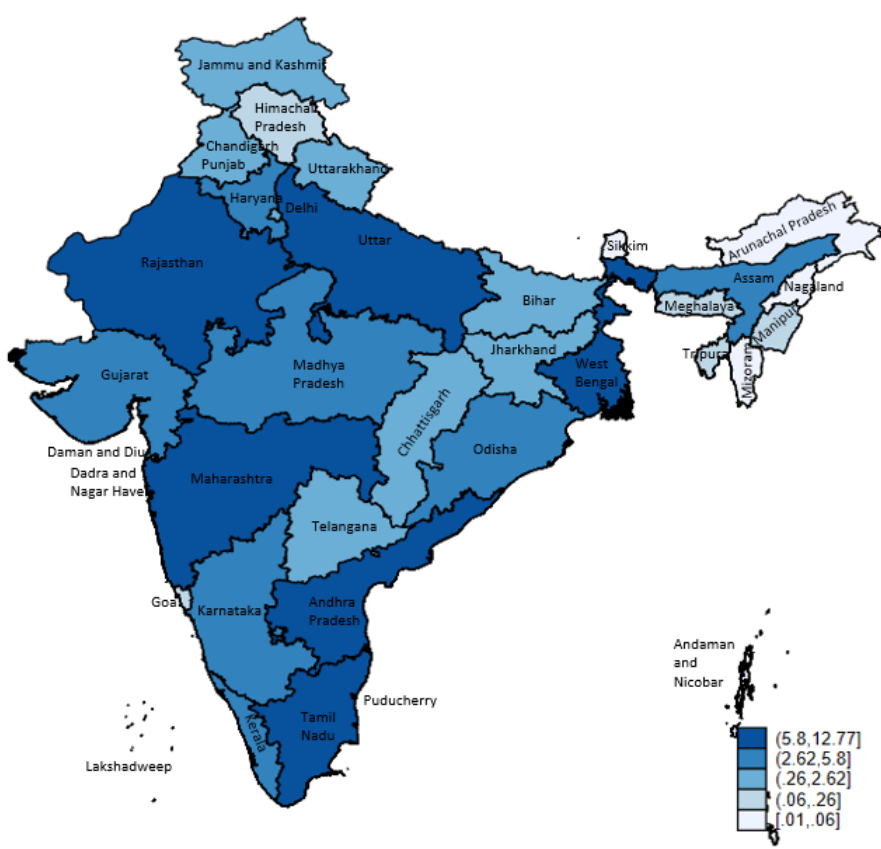

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

The geography of food processing looks different depending on whether we look at employment shares or number of workers. This distinction is important: some places are highly specialized, while others matter because of their large workforce.

Share of food processing employment by State/Union Territory in India, 2023/2024

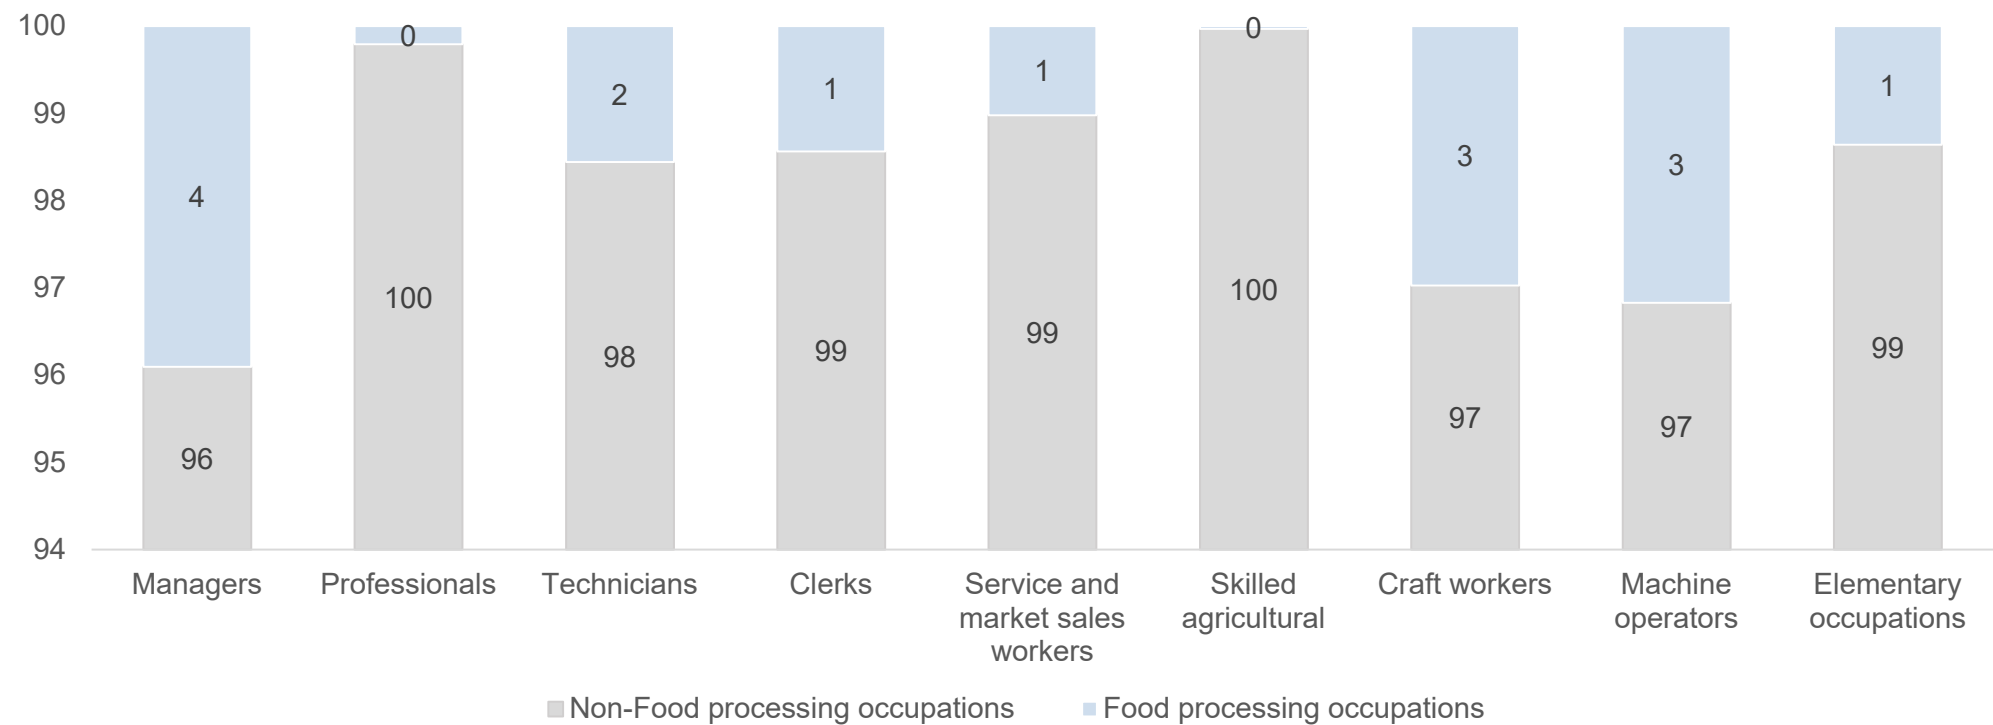

Distribution of food processing employment by State/Union Territory in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

Food processing jobs are spread across several occupation types, but the sector is especially concentrated among managers, craft workers, and machine operators. This suggests the sector needs a mix of production, technical, logistics, and management skills.

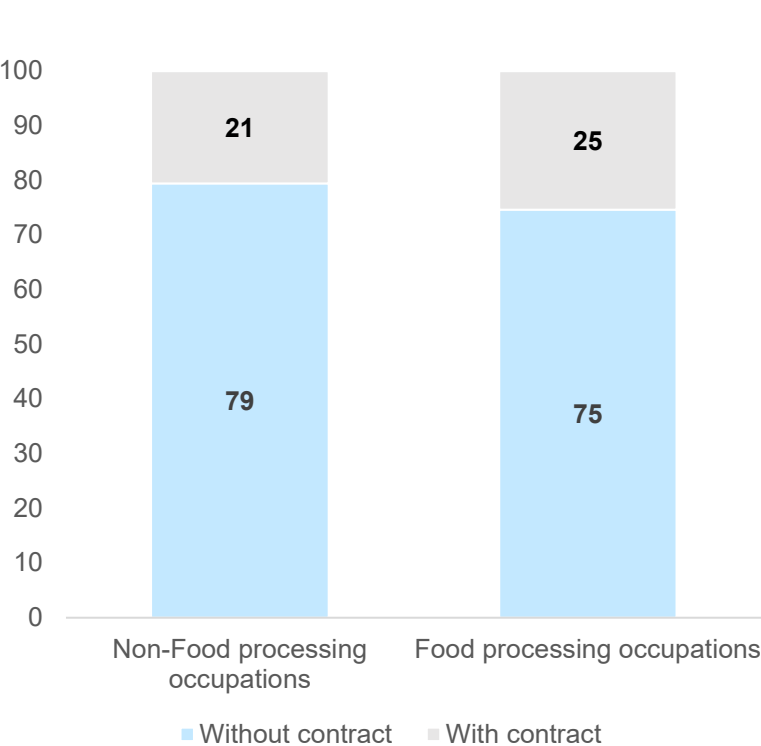

Food processing employment by type of occupation in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

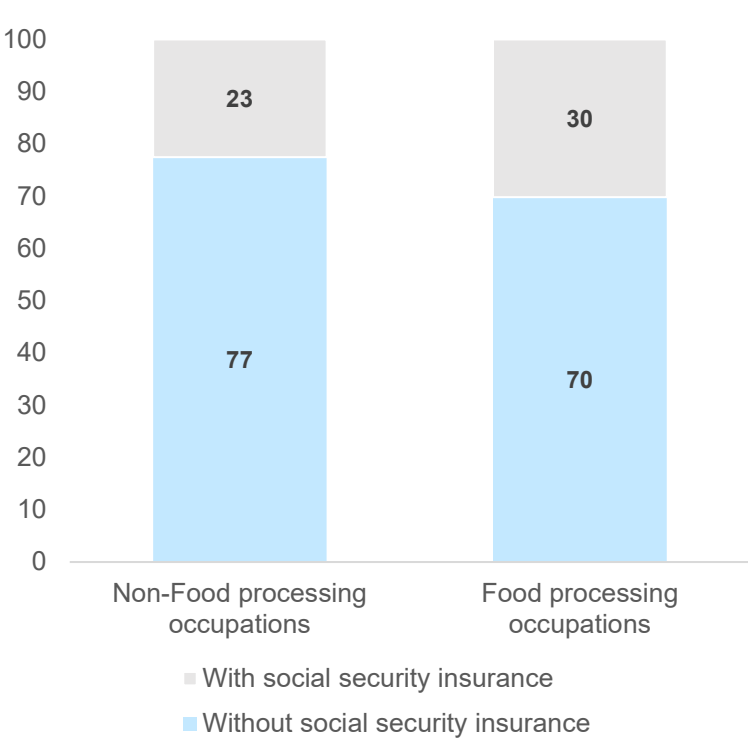

Food processing jobs appear somewhat more formal than other jobs, with higher shares of contracts and social security coverage. Still, most workers remain without contracts or social protection, pointing to continuing job-quality challenges.

Food processing employment by presence of labor contract in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

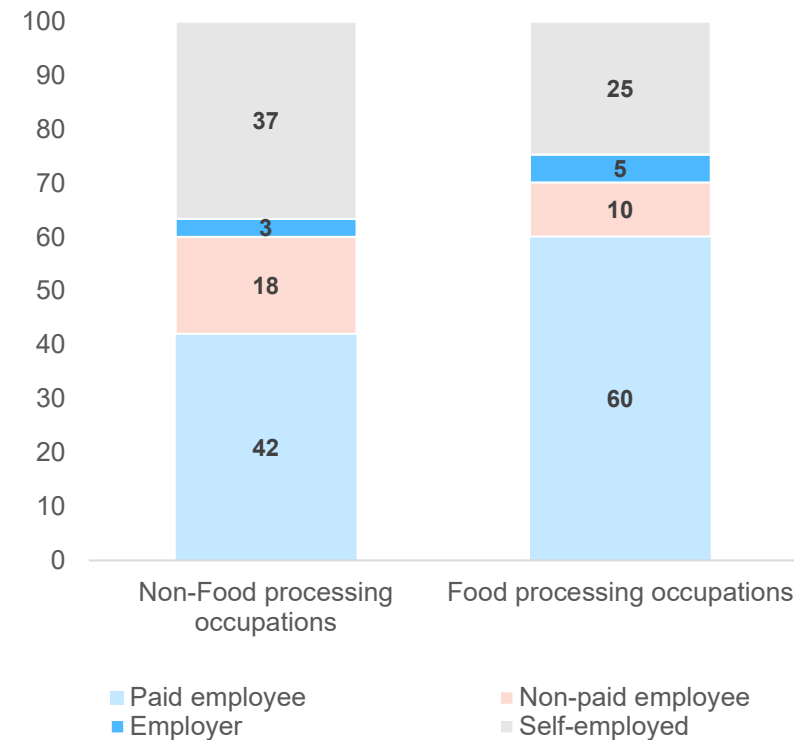

Food processing employment by social security insurance in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

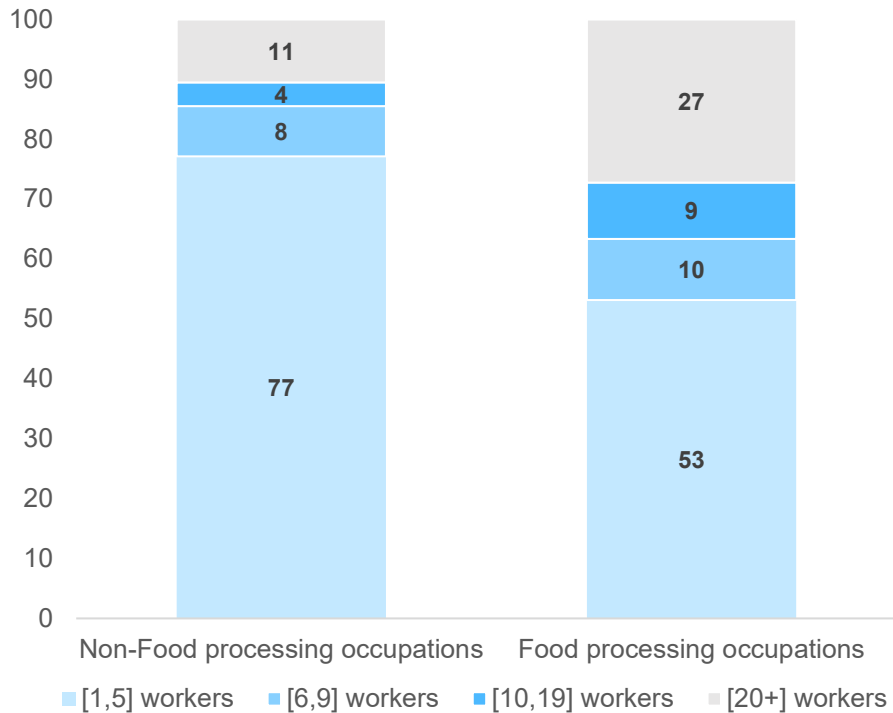

Compared with other sectors, food processing has more wage employment and more workers in larger firms. This is encouraging from a skilling perspective, because larger firms may be better positioned to support structured training and career pathways.

Food processing employment by employment status in India, 2023/2024

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

Food processing employment by firm size in India, 2023/2024

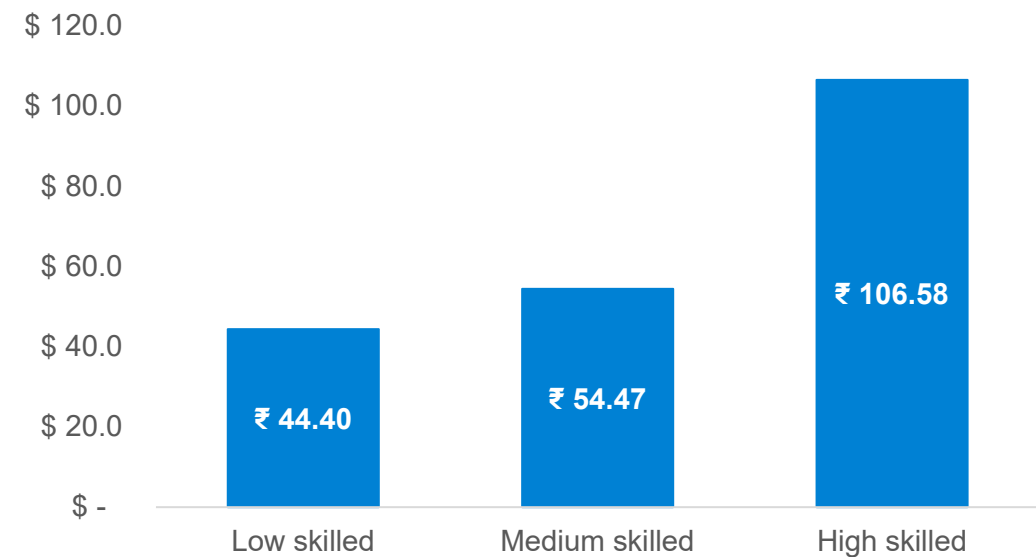

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11).

Food processing workers earn slightly less on average than non-food-processing workers. However, wages rise strongly with skill level, suggesting that helping workers move into higher-skilled roles could make a meaningful difference for earnings.

Hourly wages for food and non-food processing workers in India (in Rs), 2023/2024

Hourly wages for food and non-food processing workers by skill level in India (in Rs), 2023/2024

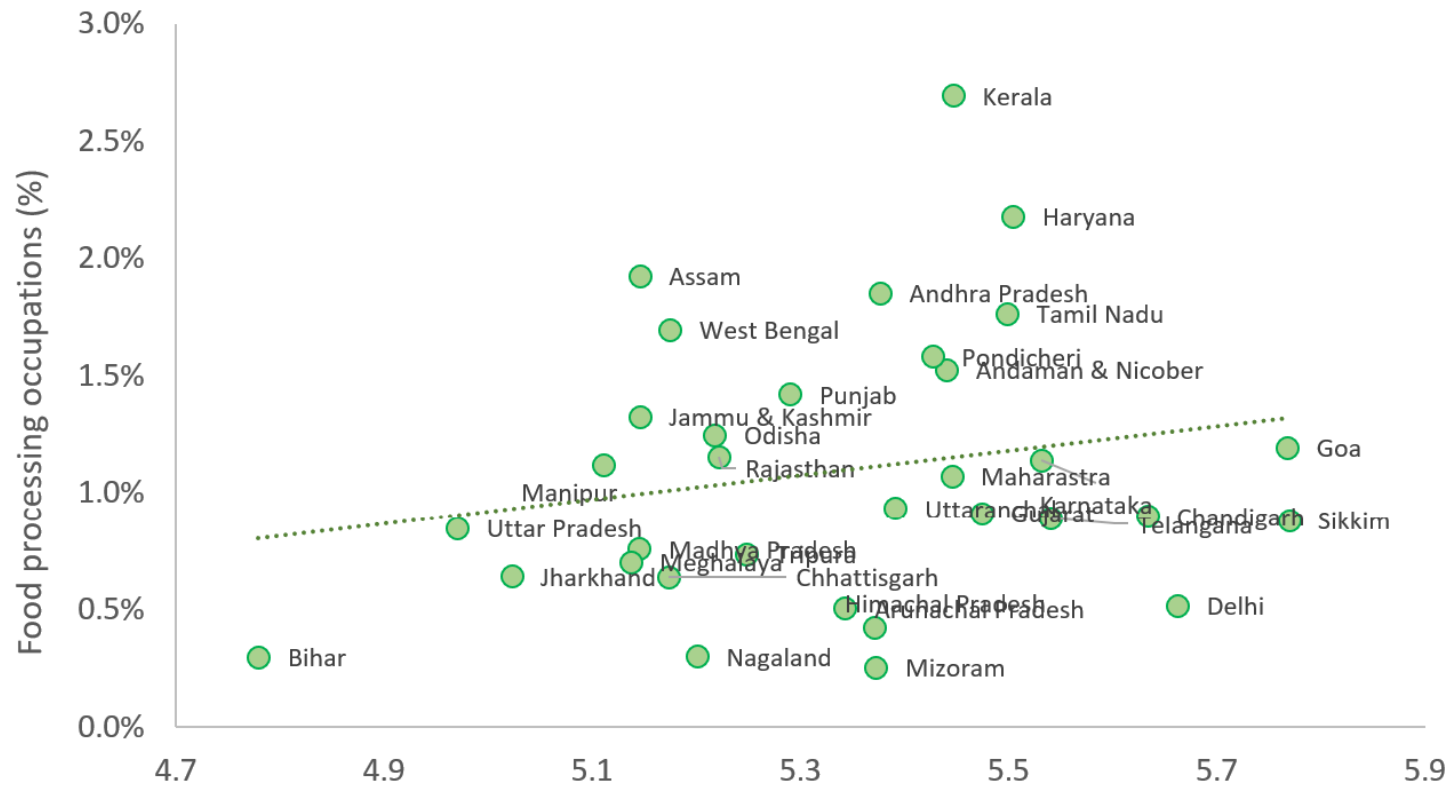

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Average hourly wages of non-food and food processing occupations are respectively estimated as the constant and the coefficient of a linear regression of hourly wages on the food processing job variable.

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Average hourly wages of non-food and food processing occupations are respectively estimated as the constant and the coefficient of a linear regression of hourly wages on the food processing job variable. Skilled occupations correspond to ISCO major groups 1, 2, and 3 (Managers, Professionals, Technicians); semi-skilled occupations to groups 4, 5, 6, 7 and 8 (Clerical support, Service & sales, Skilled agricultural, Craft & related trades, Plant & machine operators); and unskilled occupations to group 9 (Elementary occupations).

Food processing is more prominent in higher-income states, suggesting that the sector may be linked to broader economic transformation and reinforcing the case for skills investments that help workers and firms move into more productive agri-food activities.

Percentage of food processing occupations and per capita net domestic product at state/union territory level, 2023/24

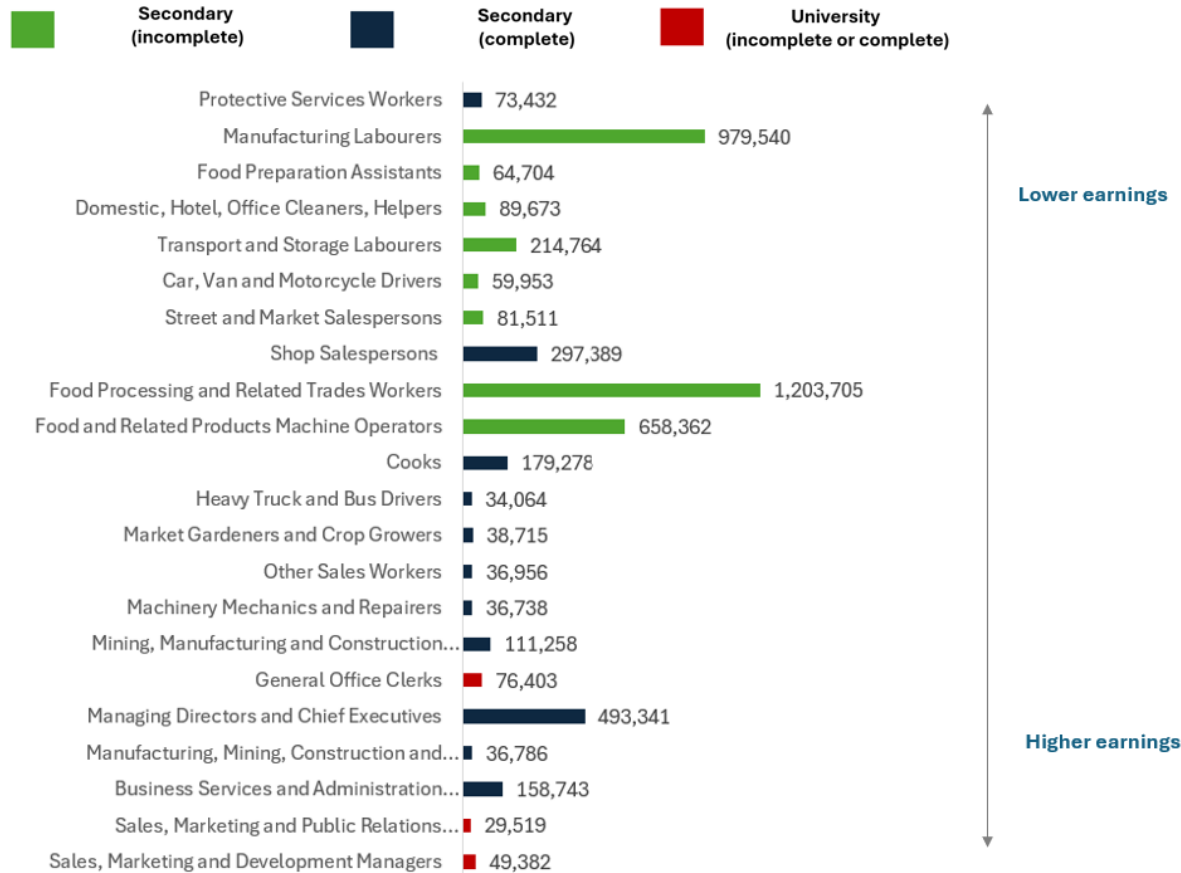

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India and Per Capita Net State Domestic Product in 2023-24 from Reserve Bank of India. The food processing sector comprises manufacturing of food products and beverages (ISIC divisions 10–11). Average hourly wages of non-food and food processing occupations are respectively estimated as the constant and the coefficient of a linear regression of hourly wages on the food processing job variable.

Food processing occupations with high employment generation

A relatively small number of occupations account for most food processing employment. This is useful for prioritization: skilling efforts do not need to cover every occupation at once, but can for example begin with those that employ the most workers.

Top occupations in the food processing sector, number of workers, and entry level education levels in India, 2023/24

Source: Own elaboration based on microdata from the 2023/24 Periodic Labour Force Survey for India. The percentages shown along the bars represent the number of workers in the occupation. Occupations are ordered using median hourly wage. Entry levels of education levels are estimated using the median education level of workers aged 25 or younger within each occupation in the sector. In cases where there are insufficient observations for the ≤ 25 age group, the overall median education level for that occupation within the sector is used as a proxy instead. The 22 food processing occupations reported account for 90.3% of total food processing employment.
